2021 – 2024

Projects

Xlotter

Role: Frontend Developer

Developed a comprehensive sports ground booking platform, Xloter, enabling users to discover nearby grounds, check real-time availability and book slots seamlessly. The system supports efficient slot management for ground owners while providing a smooth booking experience for players and teams. The platform focuses on automation, transparency, and mobile-friendly access to replace traditional offline booking processes.

IGather

Role: Frontend Developer

Developed a cross-platform event booking mobile application using React Native for discovering and booking events such as conferences, tech meetups, and community events. Implemented features like event listing, ticket booking, payment integration, and user authentication to provide a seamless booking experience.

AI-Powered Hospital Appointment Booking System

Role: Full-stack Developer

Developed a full-stack hospital appointment management platform with role-based access for Admin, Doctor, and Patient. Integrated Vapi AI voice agents to enable patients to book appointments through automated phone calls. Implemented appointment scheduling, doctor slot management, patient records, authentication, and dashboard analytics.
